

HAKI® Move

Putting renovation on the right track

Mobile scaffolding that makes work easier

Assemble and dismantle – assemble and dismantle. This is no longer necessary during renovation work. HAKI Move is mobile scaffolding that runs on rails.

Perfect for blocks of flats

This is where you really save time and money. Imagine renovating a building that is 43 metres long and 10.5 metres high. Either you have a small scaffolding that you move as you go or a large one that covers the whole of the building's 450 sq. m. façade which increases material costs by 50% to 90 % depending on the choice of decking.

Painting, plastering and changing windows

Our mobile scaffolding is perfect for simpler types of façade work like painting, plastering and changing windows. The scaffolding can also be used on uneven ground. The base is flexible and is assembled so that the rails are in line. The scaffolding runs smoothly on wheels fitted with ball bearings and can easily be moved by one man.

Universal scaffolding on wheels

HAKI Move is made from the same basic components used in HAKI Universal. If you already use our universal scaffolding, all you need to build mobile scaffolding are a few standard components from our weather protection system – the rail system that makes Universal Move.
